

Nerdy minds website improvements

The previous nerdy mind website lacked style and creativity, because of the use of plain fonts and just a solid background color of which did not give the effect it was supposed to have on users. It looked more generic than the actual desired identity

Background image

Instead of using a solid background color, a background image was added to the home page, about us page, gallery page and services page to give life or rather add visual interest and make the website less boring and more modern. The image added relates well to the brand, enhances visual appeal and illustrates a tech-themed platform for potential students as the previous website style did not align with anything technological or nerdy. The background image does not affect the readability of the information provided on the website.

Updated font

The font has been updated to add a bit of something more different from the previous website. The updated fonts give the website a more professional and stunning look. The previous font made it hard to read the website as they were basic, the current fonts are bolder and much clearer for users to read. The text color has also been changed to improve visibility as the background image made it hard to read.

Conclusion

These changes have made the website look more tech focused and more professional, this will help attract more tech audience too as it has an on brand appearance. The background image gives the website a sense of persona.
